

Leveraging the campus as a test bed for sustainability: *Catalyzing innovation, Imagination, and Impact.*

➤ **Julie Newman, Ph.D.**
Director of Sustainability

Lecturer, Dept. Urban
Studies and Planning

“I’ve heard an intense desire to see the people of MIT come together, in meaningful ways, to meet all the great challenges of our time. Above all, and most urgently: to marshal a bold, tenacious response to the run-away crisis of climate change.”

–Sally Kornbluth, MIT President

A city within a city

Planning for today and next 100 years

168 acres

190 buildings

43,000 spaces

13 million square feet

14,508 offices

5,551 labs

1,319 restrooms

528 classrooms

4,657 undergrads

7,201 graduates

1,080 faculty

15,247 staff

40 MW power plant

17 miles of utilities

400 active projects

70,000 work orders / yr.

Strategic Sustainability Leadership

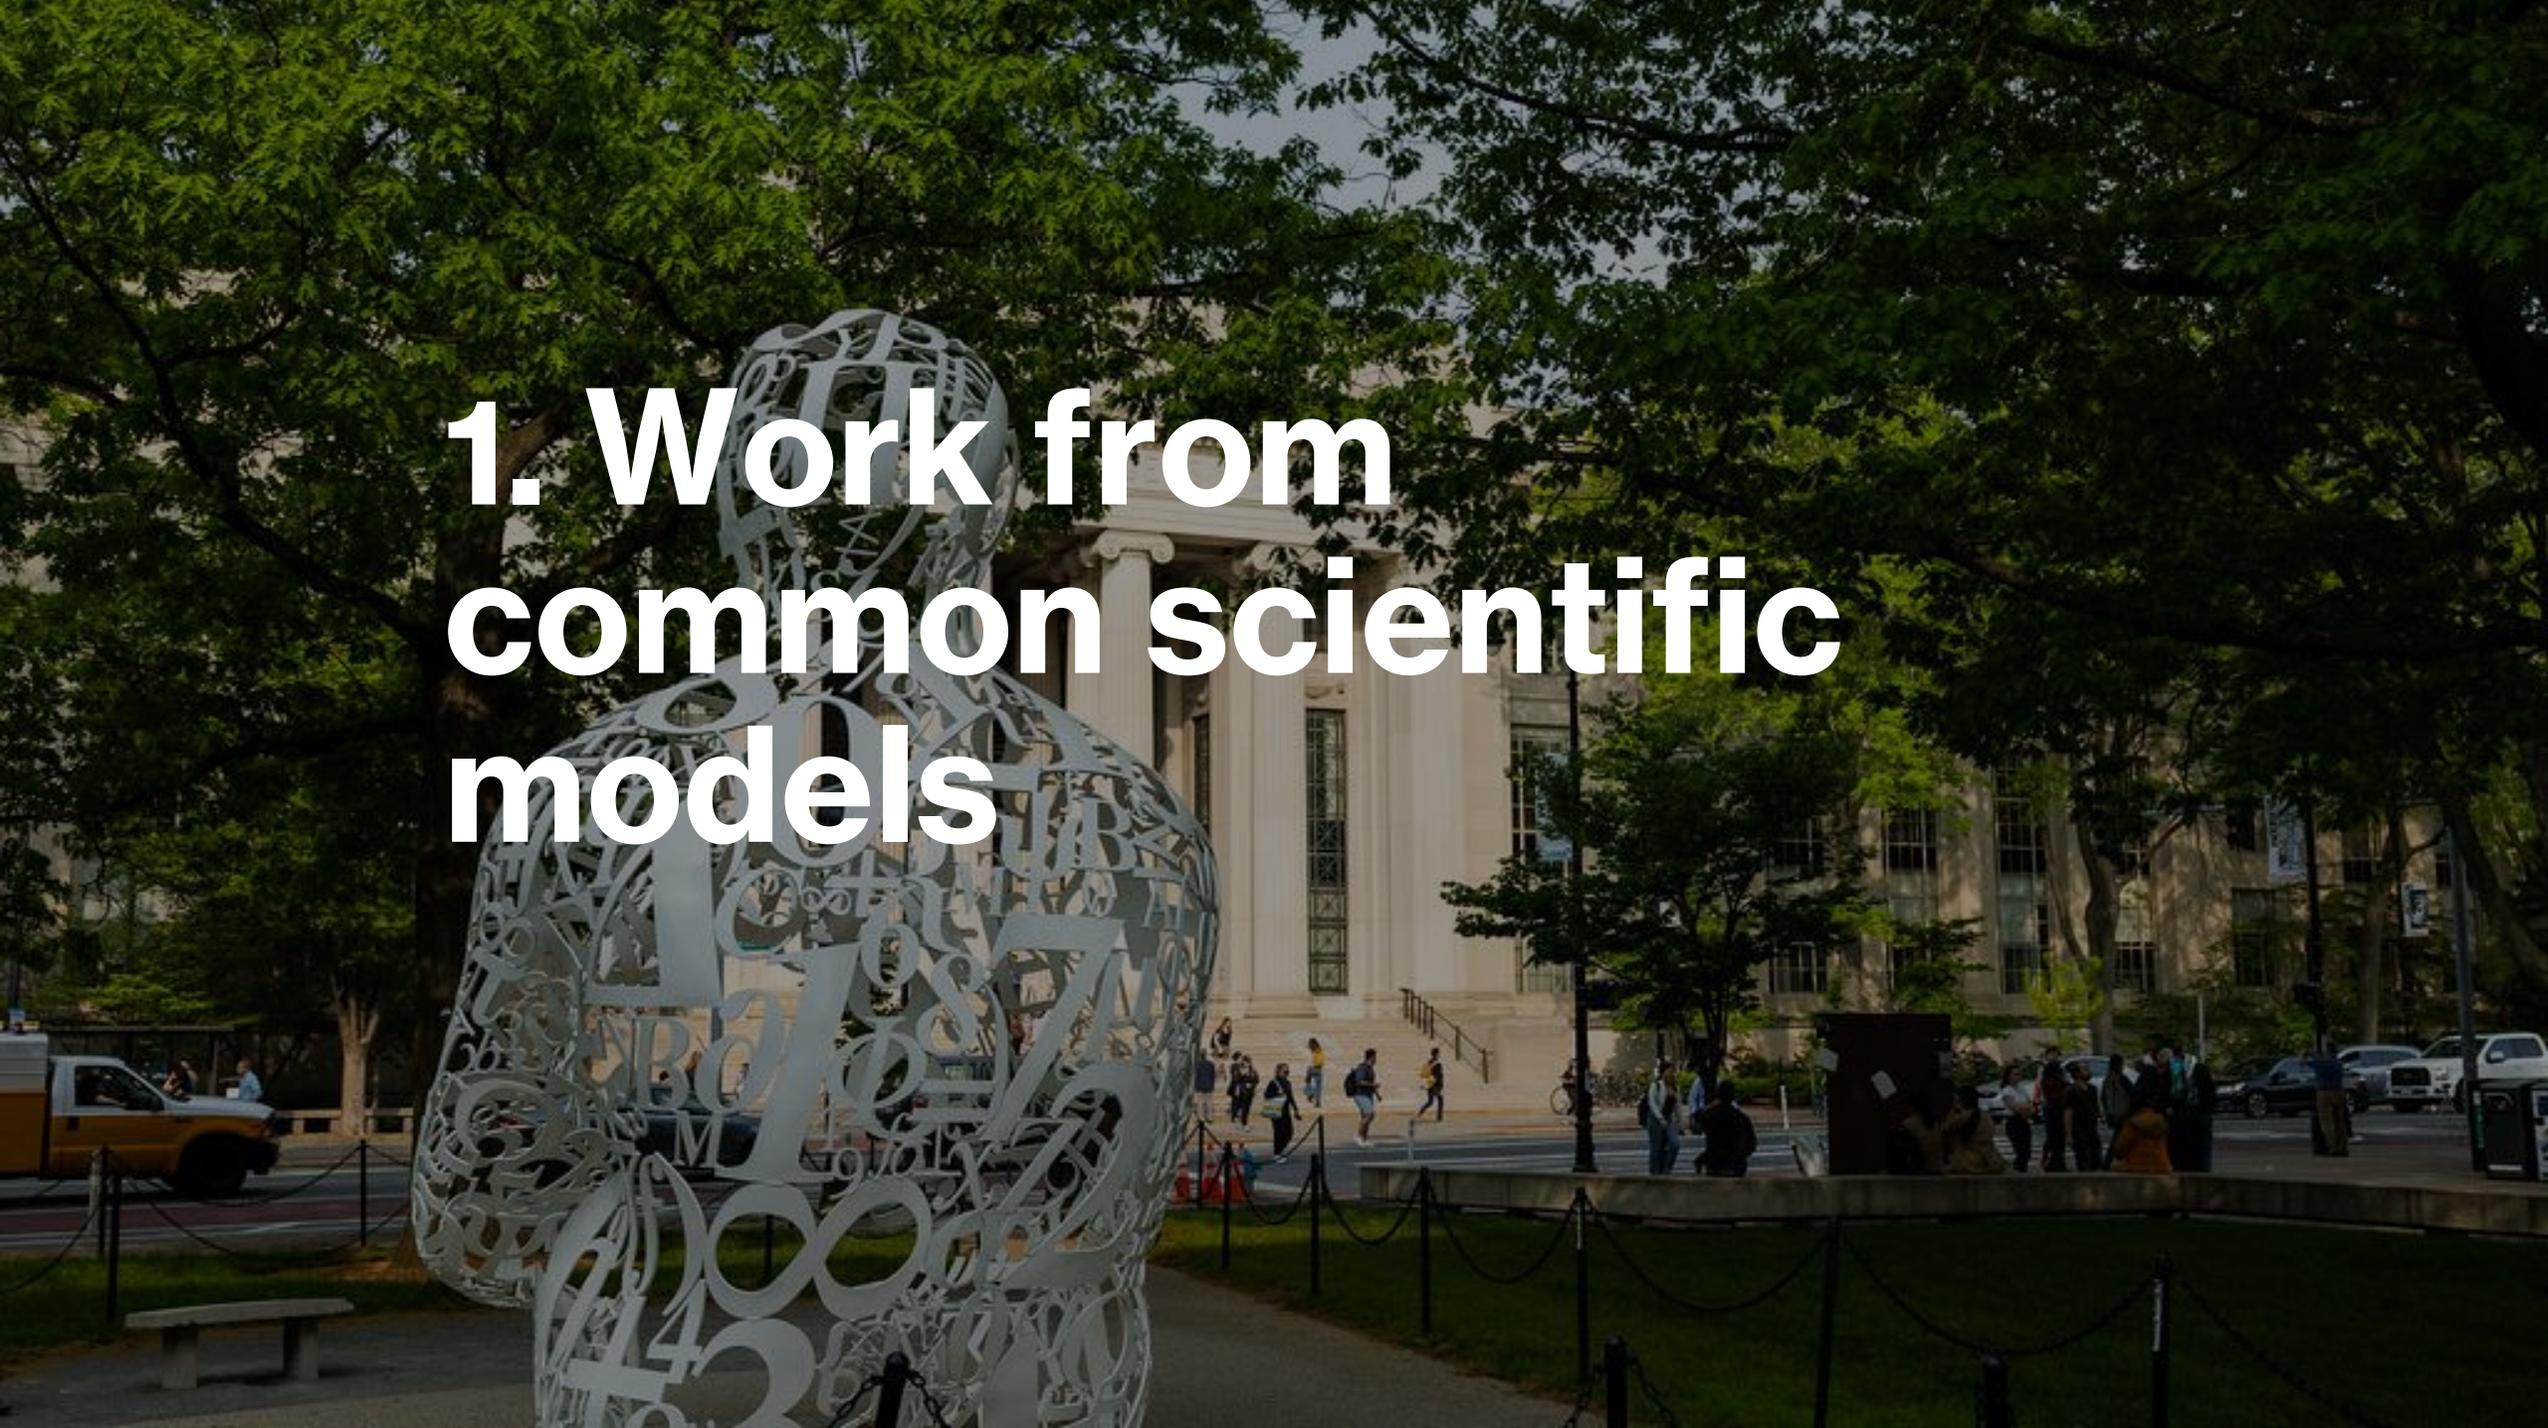

Inquiry & design via burning questions

- 1. Work from common scientific models**
- 2. Plan across scales**
- 3. Foster city-university partnerships**
- 4. Lead through collaboration & accountability**
- 5. Leverage campus as test bed**
- 6. Center equity and justice**
- 7. Implement solutions**

Inquiry & design via driving questions

What is the organizational structure and behavior that is responsive to, alters, informs, and influences the climate trajectory we are on?

A large, intricate sculpture of a human figure, possibly a woman, is the central focus. It is constructed from a dense network of white metal cutouts of various letters and numbers, creating a complex, lattice-like structure. The sculpture is positioned in the foreground, partially obscuring the view of a large, classical building with columns and a pediment in the background. The scene is set outdoors, with lush green trees framing the building and the sculpture. In the distance, several people can be seen walking on a path or plaza. The overall atmosphere is one of intellectual and artistic exploration.

1. Work from common scientific models

The image shows a modern architectural scene with three buildings. On the left is a concrete building with large, recessed window openings. In the center is a tall building with a facade of vertical red and blue glass panels. On the right is a building with a facade of vertical grey and black panels. The sky is a clear, deep blue. The text '2. Plan across scales' is overlaid in white, bold font across the middle of the image.

2. Plan across scales

Scales of Impact

Planning across scales: Oxford

Climate Community Collaborative

4. Activate the campus as test bed

A photograph of a university campus. In the background is a large, multi-story, light-colored building with many windows. In the foreground, there is a green lawn and a paved walkway. Several people are walking on the path, and a person is riding a bicycle. There are several trees with green and yellow leaves, suggesting autumn. A blue banner is hanging from a pole on the right side of the image. The text "4. Activate the campus as test bed" is overlaid in white on the left side of the image.

How do we solve for sustainability at MIT?

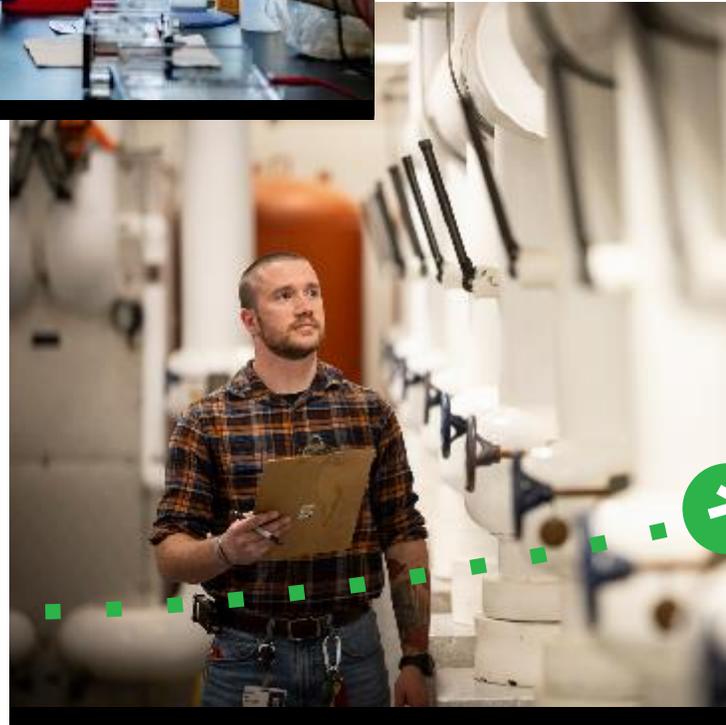

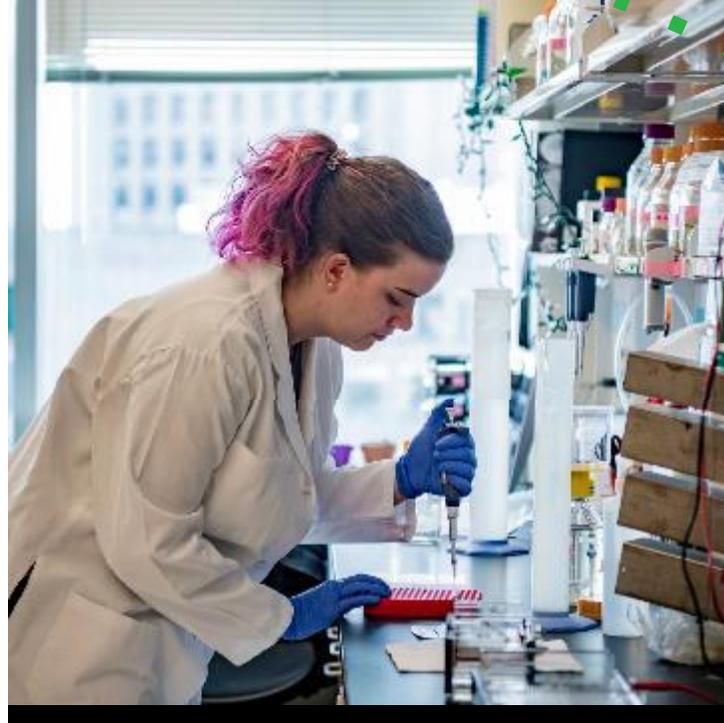

Could MIT's buildings become just as "smart" as the people who work in them?

CONNECTING THE DOTS:

USING MIT'S CAMPUS AS A "TEST BED" FOR SUSTAINABILITY

**campus
climate
action**

If you have a "smart" thermostat in your home, you know how they work to keep your surroundings comfortable and efficient. But what if your house was really big? Say... 13.9 million square feet?

Discover how an AI algorithm pilot is using data from campus spaces to help MIT reduce consumption, increase efficiency, and move closer to decarbonization.

How did they do it?

Resilience to extreme weather events

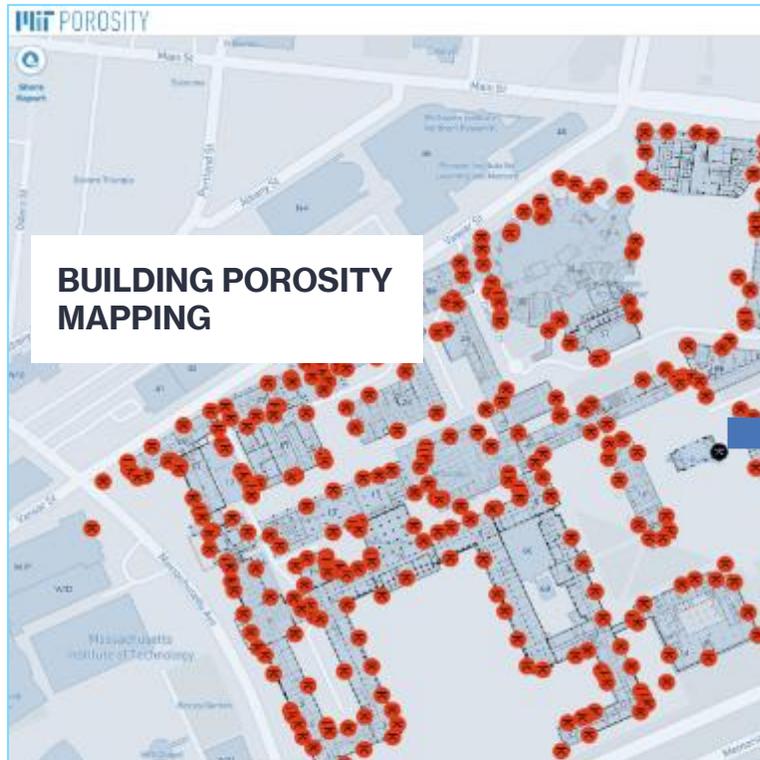

Ken Stryzpek,
Researcher, EAPS

Katya Boukin, '24
PhD student, CEE

- Incorporating flood-resilient design in all new construction projects
- Advancing campus flood models
- Evaluating campus systems and locations most vulnerable to flooding and prioritizing protection measures

Fast Forward Workstream status update: Climate Mitigation + Resiliency & GHG scope expansion

Category: Mitigation & Resilience

Commitment Name	Status	General		Progress			Timeline					
		Recent Accomplishments	Next Steps	Discovery	Implementation	Deliverable	2022	2023	2024	2025	2026+	
1. Zero Emissions Plan by 2050	On Track	<ul style="list-style-type: none"> AIE/ALE completed 20 Level 1 ASHRAE energy audits and reviewed the Level 2 audits for campus wide analysis. BEUD analysis with respect to buildings attached to the CUP - ongoing Beginning to screen technologies for Decarb strategies 	<ul style="list-style-type: none"> Workshop for framework for decarbonization Financial modeling for baseline or reference case 	On Track	On Track	On Track						2050>>
2. Building Efficiency	On Track	<ul style="list-style-type: none"> Blgd. 46 is approx. 90% complete including: Room level ECM implementation on all floors 1-7, equipment recent ECMs (VFDs, blower coils, cross-connect, steam traps, etc.), and BMS Transition 	<ul style="list-style-type: none"> Completion of Blgd. 46: Building level ECM implementation (static pressure reset, etc.) targeting end of January and start of M&V period 70 Construction Phase funding approval E26 Design & construction funding approval 	On Track	On Track	On Track						2026>>
3. Resilience & Adaptation Roadmap	On Track	<ul style="list-style-type: none"> Completion of Draft Roadmap Collection of 100 new spot elevation data points for Durlin/Nano Courtyard Completion of draft resilient landscape planning tool 	<ul style="list-style-type: none"> Launch of Stormwater v3.0 model Visualization of campus heat risk findings 	On Track	On Track	On Track						
4. Rooftop Solar	On Track	<ul style="list-style-type: none"> Design/Build contract approved W00 roof construction complete Design funding approved 	<ul style="list-style-type: none"> January: Execute contracts January: Signed Contract: Interconnection Agreement - W46, W97, E53, W20 February - March 2024: Design for solar installations March / April 2024: Construction funding request Winter / Spring 2024: O+M planning for existing installations Spring / Summer 2024: PV installation - W46, E53, W97 	On Track	On Track	On Track						2024
5. Net Zero 2026	On Track	<ul style="list-style-type: none"> Completed negotiations and executed contract for 208MW Bowman Wind project in ND, MIT taking 23%. Construction started on 200MW Big Elm solar project. 	<ul style="list-style-type: none"> Coordinated press release and communications plan of PPA accomplishments and network progress - Q3 FY24 Initiation of additional PPA project procurement process - Q3 FY24 	On Track	On Track	On Track						2026
6. AI to Reduce Energy Use	On Track	<ul style="list-style-type: none"> Improvements made to machine learning platform Pilot testing expanded to additional rooms and types of spaces on campus, in collaboration with MIT facilities and building management systems vendor 	<ul style="list-style-type: none"> Completion of initial version of machine learning platform Expansion of pilot testing on campus 	On Track	On Track	On Track						2026>>

Category: GHG Scope Expansion

Commitment Name	Status	General		Progress			Timeline					
		Recent Accomplishments	Next Steps	Discovery	Implementation	Deliverable	2022	2023	2024	2025	2026+	
7. Travel Offset	On Track	<ul style="list-style-type: none"> Socialized program with Elizabeth Lennox, AD-Oans, and with AACI Climate Vault catalog live for pilot participants in Cosma 	<ul style="list-style-type: none"> Communicate program to faculty in pilot areas 	On Track	On Track	On Track						
8. Add in Scope 3 Emissions	On Track	<ul style="list-style-type: none"> Completed update of business travel dashboard through FY2023 Established agreement with Audit Division for consulting on data and reporting processes 	<ul style="list-style-type: none"> Deployment of new back-end data processing systems Socialization of GHG impact from Contributions, Purchased Goods + Services, Comming 	On Track	On Track	On Track						2026
9. Add in Off Campus Emissions	On Track	<ul style="list-style-type: none"> Completed energy data collection from Bates, Wallcut/Haystack, Endicott House facilities for FY2023 Calculated equivalent GHG emissions for each site 	<ul style="list-style-type: none"> Will publish additional emissions in our FY2023 GHG reporting in Q3 FY24 Will institutionalize data collection and reporting processes in Q3 and Q4 FY24 	On Track	On Track	On Track						2026

Staff / Faculty research teams

Technology	Description (working version)	Faculty / Staff point of contacts
1 Building Baseline Model	Build an hourly load profile model for MIT campus buildings and apply a series of off-the-shelf retrofits to predict future load profiles for electricity, heating and cooling. The other technology packages will be evaluated based on these evolving load profiles.	Christoph Reinhart / Siobhan Carr/ Steve Lanou/
2 District Geothermal	A review of how the existing campus district energy system can be electrified and evolve over time to meet evolving load profiles [1].	Pablo Martinez / Carlo Fanone
3 Avoided Costs	Quantify costs that would occur to MIT from inaction such as a carbon tax or reputational costs.	Siqi Zheng / Steve Lanou
4 Future grid emissions and capacity; Resiliency	Predict how the New England grid might decarbonize between now and 2050 and what excess capacity the grid might have during key times in the year based on [2].	Andy Sun / Jon Sepich
5 High resolution building controls (AI)	Survey of next generation sensor, actuator and control technologies for room-level HVAC control. Quantify savings based on [3].	Joe Paradiso / Wade Burner
6 Energy efficient lab	Identify safe transition pathways to reduce operational energy use in MIT lab based on [3].	Brad Olsen / Jim Doughty
7 Deep geothermal	In this activity we will investigate the readiness of deep geothermal wells [>5,000ft] for heating and electricity generation based on [2].	Christoph Reinhart / Joe Higgins
8 Micro-reactors	Evaluate emerging small (5-20MW) nuclear reactor technologies and adoption potential by MIT based on [3]	Jacopo Buongiorno / Janine Helwig
9 Energy storage including EV and PV	Study potential use of large electric and thermal storage for campus resiliency based on [2].	Jessika Trancik / Randa Ghattas
10 Local carbon capture	Evaluate various carbon capture opportunities that could be deployed on or near the MIT campus to balance residue on campus emissions.	Betar Galant / Jessica Parks

An aerial photograph of a group of approximately ten people sitting around a long wooden table in a rooftop garden. The table is covered with various papers, colorful sticky notes, and tools like scissors and pens, suggesting a collaborative workshop or meeting. The garden is lush with greenery, including various plants in pots and a vertical garden system along the edge. The overall atmosphere is one of focused collaboration in a natural setting.

6. Center Equity and Justice

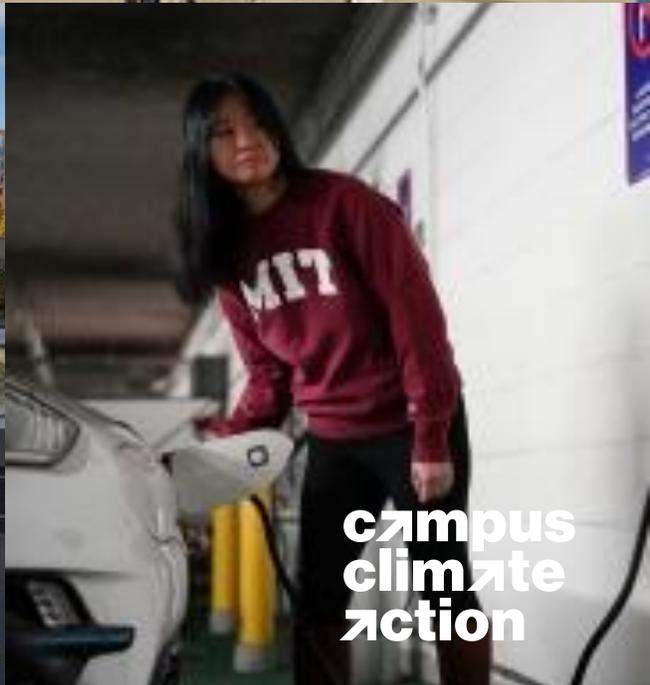

Reducing MIT's Own Climate Impacts, Advancing Justice

How can MIT reduce its carbon emissions while promoting equity, benefiting local economies and communities, and improving public health?
